

"treatment_plan" : "Based on the reported findings, the IPP team develops and agrees on a treatment plan, which the team facilitator will communicate to the family. The plan includes the following actions: SLP – Continue Elizabeth’s current speech-language therapy, targeting articulation. The team recommends a full language evaluation. Geneticist – Follow up with the geneticist to discuss results of the microarray. ENT – Have Elizabeth return for a nasopharyngoscopy, so that the ENT can evaluate VP closure for speech and confirm a surgical plan."

Treatment Plan: Manual

"treatment_plan" : "The IPP team develops and agrees on a treatment plan, which includes: SLP – Continue Elizabeth’s current speech-language therapy, targeting articulation; Geneticist – Follow up with the geneticist to discuss results of the microarray; ENT – Have Elizabeth return for a nasopharyngoscopy to evaluate VP closure for speech and confirm a surgical plan; Surgeon – Elizabeth would benefit from a pharyngeal flap; Psychologist/Social Worker – Elizabeth and her family meet with the psychologist and social worker to discuss the risk for learning difficulties and mental health concerns associated with 22q11DS."

Treatment Plan: Llama

"treatment_plan" : "The team developed a coordinated plan including continued speech-language therapy targeting articulation, follow-up with the geneticist to discuss microarray results, and a nasopharyngoscopy with the ENT to evaluate velopharyngeal closure and confirm a surgical plan. After confirming the 22q11.2DS diagnosis, the plan was expanded to include pharyngeal flap surgery, additional medical workup (MRI of neck, kidney ultrasound, cardiac evaluation), and meetings with a psychologist and social worker to discuss learning difficulties and mental health concerns associated with the diagnosis. The team will continue to monitor Elizabeth's progress with annual re-evaluations."

Treatment Plan: Claude

"treatment_plan" : "The IPP team develops and agrees on a treatment plan: SLP – Continue speech-language therapy and recommend full language evaluation. Geneticist – Follow up on microarray results. ENT – Schedule and perform nasopharyngoscopy. Surgeon – Plan for pharyngeal flap surgery. Psychologist/Social Worker – Discuss risk for learning difficulties and mental health concerns, provide support resources. Surgery and postoperative assessment are planned, with ongoing annual evaluations."
